DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 2, 4, 5, 7, 8 - 9, 11 - 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over the applicants admitted prior art (AAPA) in view of U.S. patent 6,985,483 to Mehrota et al.

With regard to claim 1, AAPA teaches, starting on page 1 lines 10+ of the specification, using lookup tables in routers to lookup ports, said routing tables being stored in DRAM. AAPA also identifies a problem existing in the prior art wherein this routine introduces excessive unwanted latency. AAPA does not however teach a solution to this problem to comprise using both DRAM and SRAM in the lookup table.

This is taught in Mehrota. See col 14, especially lines 18+.

It would have been obvious to one of ordinary skill in the art at the time of the invention to have solved the problem existing in the prior art comprising latency in DRAM based router memories as stated in the AAPA, in light of the teachings of Mehrota et al, in order to provide a method of routing data at speeds which make the said routers efficient and economical to use.

With regard to claim 2, note the teachings of SRAM and DRAM and the

Art Unit: 2661

obviousness of searching the lowest "cost" memory first before resorting to a search of the higher "cost" memory.

With regard to claim 4, note the use of a binary tree search in figure 8.

With regard to claim 5, see the rejection above and note the necessity of consulting the SRAM portion.

With regard to claim 7, see the tree in figure 6.

With regard to claims 8 – 9 and 11 - 13, see the rejections above.

3. Claims 3, 6, 10, and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over the applicants admitted prior art (AAPA) in view of U.S. patent 6985483 to Mehotra as applied to claims 1, 2, 4, 5, 7, 8 - 9, and 11 – 13 above, and further in view of U.S. patent 6,154,746 to Berchtold et al.

AAPA/Mehotra teach the invention as discussed above, but do not teach searching using bisection search. This is taught in Berchtold et al. See col 15 lines 15+ and col 1 lines 30+.

It would have been obvious to one of ordinary skill in the art at the time of the invention to have searched the data of AAPA/Mehrota using bisection search, in light of the teachings of Berchtold in order to provide one more method for speeding up the search of the data.

4. Applicants remarks are moot in view of the new grounds of rejection.
